

# Cyber Security Monitoring Services

**Don't risk your bottom line. Get the data protection you need with NeoCyber™.**

One in five small businesses falls victim to hackers every year, and of those, about 60% go out of business within six months of the attack.\* Stay ahead of security threats with continuous monitoring, enhanced intelligence, proactive prevention, early threat recognition, rapid response, and investigation of root causes. Better knowledge means better protection when combined with comprehensive tools to defend your networks, data, devices, web traffic, applications, and more.

## DON'T WAIT UNTIL AFTER A BREACH.

If large companies like Yahoo can be breached, then the likelihood of a smaller organization being hacked is far greater. According to the SEC, at least 50% of small businesses registered in the US alone have been breached in the past 12 months, resulting in reputational damage, consequential costs, and loss of customers. So the question is not IF, but WHEN. As a business leader, are you confident in what you are doing to protect your information assets from cyber theft?

## WE TRACK CYBER THREATS SO YOU DON'T HAVE TO.

Neovera's Cyber Security Monitoring Services extend the security of your critical information by enabling awareness, increased compliance, rapid response and the ability to manage cyber threats and vulnerabilities associated with your environment. We provide 24x7 security monitoring, log management and security device management to protect against

threats and ensure compliance with regulatory requirements.

## IMPROVE COMPLIANCE & ALLEVIATE ALERT FATIGUE

Organizations are under constant pressure to protect data and critical systems. Monitoring logs is a critical component of a security strategy and a requirement for regulations such as PCI DSS, HIPAA, SOX and others. Too often, the burden placed on internal teams to monitor systems 24x7 causes organizations to have gaps in their detection or not to monitor logs at all.

Neovera's security monitoring service provides clients with extensive visibility by identifying potential threats within their environment. Our expert security engineers collect, monitor, and manage logs from virtually any device capable of producing a syslog, including firewalls, IDS/IPS, UTMs, routers/switches and network devices.

## CYBER SECURITY MONITORING PACKAGES

Neovera offers multiple security packages customized to your infrastructure and business needs. Choose from our IPS, UTM, Bronze, Silver, Gold, or Platinum packages, all of which include 24x7 Cyber Security Monitoring and expert support. If you're not sure which service is the best fit for your business, we're here to help!

SECURITY SERVICE	IPS	UTM	BRONZE	SILVER	GOLD	PLATINUM
24x7 Continuous Security Monitoring and Event Correlation	Yes	Yes	Yes	Yes	Yes	Yes
24x7x365 Joint Security Operations Center (JSOC)	Yes	Yes	Yes	Yes	Yes	Yes
Detailed Security Reports	Yes	Yes	Yes	Yes	Yes	Yes
Detailed Compliance Reports		Yes	Yes	Yes	Yes	Yes
Client Dashboard		Yes	Yes	Yes	Yes	Yes
Routers/Switches Monitoring			Yes	Yes	Yes	Yes
Firewalls (network based) Monitoring			Yes	Yes	Yes	Yes
Log Monitoring, Correlation, and Storage			Yes	Yes	Yes	Yes
Network Intrusion Detection (NIDS) and Monitoring*				Yes	Yes	Yes
Wireless Intrusion Detection (WIDS) and Monitoring*				Yes	Yes	Yes
Vulnerability Scanning and Reporting					Yes	Yes
Host Intrusion Detection (HIDS) and Monitoring*					Yes	Yes
Monitoring of Server(s)					Yes	Yes
Monitoring of Intrusion Prevention System (IPS)	Yes	Yes			Yes	Yes
Monitoring of Anti-Virus Gateway(s)		Yes			Yes	Yes
Monitoring of Unified Threat Management (UTM) Firewall Appliance(s)		Yes				Yes
Monitoring of Data Loss Prevention (DLP) Service		Yes				Yes
Advanced Persistent Threat (APT) Protection		Yes				Yes
Web URL Filtering		Yes				Yes
Application Control		Yes				Yes
Reputation Enabled Defense		Yes				Yes
Spam Blocking		Yes				Yes

\* Neovera will provide Network Intrusion Detection (NIDS), Wireless Intrusion Detection (WIDS), and Host Intrusion Detection (HIDS) services if the client does not have one, in addition to monitoring. WIDS requires a client provided WAP and wireless network adapter.

### 24x7 JSOC - THREAT INTELLIGENCE AT ITS BEST

Neovera's Joint Security Operations Center (JSOC) is staffed 24x7 by security experts and analysts, located onsite at our datacenter compound, the largest Internet and Mobile traffic exchange in North America. Our JSOC facility is highly secure, equipped with security guards, biometric access technology, and physical mantraps.

The Neovera JSOC is at your service 24x7x365, providing the extra layer of protection between you and the security threats that can damage your business. Critical information systems are replicated in real-time, ensuring uninterrupted service delivery uptime under all circumstances. Our security information and event management (SIEM) system aggregates and correlates data from security feeds

such as network discovery, vulnerability assessment and intrusion detection systems, creating a "single pane of glass" for our security experts to monitor and protect your enterprise.
